

REVERSE VENDING MACHINE

Use · Compact · Recycle

Reduce waste volume of single use plastic bottles, cups and cans with the Reverse Vending Machine. One solution that stimulates and facilitates recycling and volume reductions by up to 85%.

Key Benefits:

- Reduction of volume and increased segregated waste collection are the first steps towards smart waste management and improved CSR
- Less waste volume leads to increased economic savings; reduction of bins, waste emptying costs, internal handling, management cost and transportation and co2 emissions
- Cleanliness and hygiene
- Graphic customisation - high quality print on a protective and easy-to-clean vinyl graphic

Specifications:

- 72 x 60 x H.170 cm

Key Components:

- Automatic and programmable internal sanitisation unit
- Reduces 45 sacks to just 5 (1:9)
- 7-inch Android tablet touch screen with integrated Wi-Fi for remote connection, updates of multimedia content & Firmware and email functionality related to the machine alarms (e.g. full plastic bag)
- Two machine options; compactor for cans & plastic bottles or shredder for paper & plastic cups
- Rielda locks on front with 3-point locking door
- Self-blocking system to facilitate the elimination of materials that may not have been inserted correctly
