

# WASTE MONITOR

Apportion your waste costs · Reduce your environmental impact · Maximise cost efficiencies

The state-of-the-art B&M Waste Monitor suite can be tailored to recognise individual wastes and recyclates using radio frequency identification technology, bar codes or touch screen terminals. Weights are data-captured and held on the system, allowing you to then allocate individual tenants/customers with their specific and relevant waste costs.

**Suitable for:** Multi-tenanted or multi-functional facilities.

## Key Benefits:

- Control costs and improve carbon footprint
- Apportion waste costs to the individual users of the system
- Weight and Measures approved
- User login with password protection
- Compare and manage weight, volume or waste streams from different users, tenants or manufacturing processes
- Compare effectiveness of changes in process and procedures to reduce waste streams, allowing for continuous improvement
- Real-time information, making reporting more efficient, less time consuming and more cost effective
- Tailored to fit customer's premises
- B&M environmental reports incorporate data on total waste produced, demonstrating the amount of carbon you've saved

## Key Components:

- Digital weight indicator with LCD touchscreen
- Robust, heavy duty platform scales
- Control unit with ability to accept / decline each part of process
- Secure User Access controls
- RFID reader identifying the robust tags fitted to each bin – apportioning the costs appropriately
- Data transfer telemetry system – the data can be emailed, recorded onto a memory device or sent directly via a hardwired LAN to a control computer
- Reporting software producing excel csv files for customer integration
- Can be fitted to a static compactor with bespoke bin-lifting device (Static Waste Monitor)
