

# FOOD WASTE STATION COMPACT

Reduce your waste costs · Boost your carbon footprint · Improve your environmental impact

With the state-of-the-art B&M Food Waste Station Compact, food waste is macerated into a liquid form and pumped directly into a built-in de-watering system, forcing out excess liquid. This liquid is fed directly into the drain resulting in a greatly reduced volume of food waste, which is then collected in small, easily managed, lidded bins, ready for onward processing.

**Suitable for:** Smaller kitchens in offices, pubs, restaurants and fast food outlets.

## Key Benefits:

- Reduce food waste volume by 80%
- Reduce food waste mass by 60%
- Reduce food waste collections and, consequently, reduce costs
- Improve your carbon footprint and lower your environmental impact
- Increase efficiency by processing up to 100kg of food waste per hour
- No loading schedule, process waste as and when you need to

## Key Components:

- Easy to use
- Compact design with short processing times
- Visual PLC control panel
- Bin location within the footprint
- Self-cleaning programme
- Robust construction, fully enclosed system
- Intelligent bin-full sensor
